IAQ & Energy Symposium 2022

**PRESENTATION ORIGINALLY GIVEN BY:**

Dr. Andrew Persily, [andyp@nist.gov](mailto:andyp@nist.gov)  
National Institute of Standards and Technology  
Gaithersburg, Maryland USA

EPA Indoor Air Quality Science Webinar  
17 November 2021

### Background

#### CO<sub>2</sub> part of ventilation & IAQ discussions since 17<sup>th</sup> century

- Impacts on occupants
- Bioeffluent odor perception
- Ventilation rate estimation
- Ventilation control

IAQ & Energy Symposium 2022

#### Misinterpretation of CO<sub>2</sub> for years

**More recently:** more interest, more measurement, more confusion

### CO<sub>2</sub> monitoring to manage ventilation

#### Long-term: Demand control ventilation

#### Short-term: Today's focus

Multiple purposes & approaches

- IAQ assessment
- Ventilation rate estimation
- Infection risk

Not always clear to user or receiver

IAQ & Energy Symposium 2022

### Long term indoor CO<sub>2</sub> monitoring demand control ventilation

Earliest references from 1970s

To avoid over- and under- per person ventilation rate

Required by building energy efficiency standards

Most relevant in spaces with unpredictable occupancy variations

IAQ & Energy Symposium 2022

### Short-term CO<sub>2</sub> monitoring

- IAQ Metric
- Ventilation Rate
- Infection Risk

Courtesy of David Meyer, Shenandoah University

ppm is not an SI unit.  $\mu\text{mol of CO}_2/\text{mol of air}$  or  $\mu\text{L/L}$  are. Using ppm, today.

IAQ & Energy Symposium 2022

### CO<sub>2</sub> as an IAQ metric

Maybe for contaminants related to # of occupants & activities but other important contaminants and sources

IAQ & Energy Symposium 2022

### CO<sub>2</sub> to estimate ventilation rate

Tracer gas test methods:

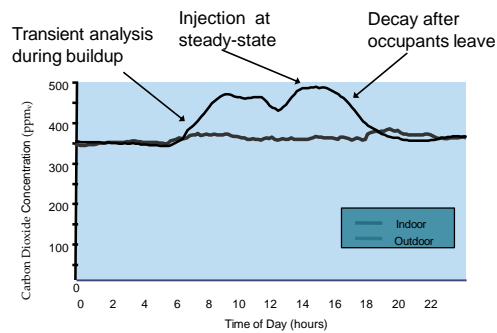

ASTM E741 (D6245 for CO<sub>2</sub>), ISO 12569

*Decay, Constant injection, Constant concentration*

Theory and assumptions; Single zone!!!

IAQ & Energy Symposium 2022

Persily, A.K. and Dols, W.S. (1990) The Relation of CO<sub>2</sub> Concentration to Office Building Ventilation, Air Change Rate and Airrightness in Buildings, ASTM STP 1067, 77-92.

### Using peak CO<sub>2</sub> to estimate per person outdoor ventilation rates

Single-zone constant injection tracer gas method

$$Q_{out} = \frac{G_{CO2}}{(C_{in, Steady-state} - C_{out})}$$

Assumptions: Single-zone, constant Q<sub>out</sub>, G<sub>CO<sub>2</sub></sub> constant & known

CO<sub>2</sub> generation depends on activity, sex, age, body mass

Estimating before steady-state overestimates air change rate

Uncertainty calculations per ASTM D6245

**Example calculation:**  
 G<sub>CO<sub>2</sub></sub> = 0.0045 L/s; C<sub>ss</sub> = 1000 ppm<sub>v</sub>; C<sub>out</sub> = 400 ppm<sub>v</sub>  
 Q<sub>out</sub> = 7.5 L/s per person

IAQ & Energy Symposium 2022

### CO<sub>2</sub> as an indicator of infection risk

To verify protective ventilation rate OR Indicator of risk

*What is a protective ventilation rate?*

*Rebreathed air*

*Fate & transport of CO<sub>2</sub> ≠ F&T of virus-laden aerosol*

**New studies and insights in real time**

E.g., Kappelt, et al. 2021: "by measuring CO<sub>2</sub> concentrations, only the number and volume concentrations of released particles can be estimated with reasonable certainty, while the number of suspended RNA copies cannot."

IAQ & Energy Symposium 2022

## Thoughts on CO<sub>2</sub> monitoring

### Variation happens

Occupancy, activities, ventilation system operation, weather

### Measurement

Repeat: Calibration; Sampling location, duration and timing relative to occupancy; Compare to outdoors; Uncertainty; Repeat

Office building ventilation rate vs T<sub>out</sub>

IAQ & Energy Symposium 2022

## Thoughts on CO<sub>2</sub> monitoring

### What value: Base on target OA/person or infection risk?

CDC: 800 ppm<sub>v</sub>, "potential target benchmark for good ventilation"

REHVA: 800 ppm<sub>v</sub>, "indicator of good ventilation and IAQ."

UK SAGE: Spaces with high aerosol generation, < 800 ppm<sub>v</sub>

• Rationale for values???

ASHRAE, WHO & others recommend disabling DCV or reducing setpoint to ≈500 ppm

<https://www.gov.uk/government/publications/emg-and-spi-b-application-of-co2-monitoring-as-an-approach-to-managing-ventilation-to-mitigate-sars-cov-2-transmission-27-may-2021>

## More thoughts on CO<sub>2</sub> monitoring

### Make sure ventilation system is operating as intended

Outdoor air, filtration, controls, T & RH, ...  
Always been a good idea; more so now

### Using CO<sub>2</sub> monitoring

To estimate ventilation rate, OR  
To prioritize for inspection & repair

### Evaluating Ventilation Performance, Chapter in upcoming Handbook of Indoor Air Quality

Performance issues: System status, Envelope leakage, Ventilation system airflows, Outdoor air change rate, Interzone airflow, Air distribution  
Building and system design information: Outdoor air intake rate, controls, ...

IAQ & Energy Symposium 2022

## More thoughts on CO<sub>2</sub> monitoring

### No OA ventilation system?

Natural ventilation or leakage only

Tracer gas methods challenging for natural ventilation

IAQ & Energy Symposium 2022

## Example calculations

ASHRAE Standard 62.1 rates and default occupancies  
Occupants (sex, age, mass, physical activity) to estimate CO<sub>2</sub> generation rate; Ceiling height; C<sub>out</sub> = 400 ppm<sub>v</sub>

### Office space

### Restaurant

### Classroom

### Auditorium

IAQ & Energy Symposium 2022

## Example calculations

	Office	Classroom	Restaurant	Auditorium
<b>Baseline ventilation parameters</b>				
L/s per person	8.5	7.4	5.1	2.7
Air changes/h	0.5	2.2	3.2	1.9
Time to 95 % steady-state, h	5.9	1.4	0.9	1.5
<b>Steady-state CO<sub>2</sub>, ppm<sub>v</sub></b>				
Baseline (Std 62.1)	999	1031	1533	2150
50 % occupancy	699	749	1028	1275
+50 % ventilation	799	821	1156	1567
10 L/s per person	909	867	976	873

IAQ & Energy Symposium 2022

Search on: NIST CO2 tool

IAQ & Energy Symposium 2022

## Summary

### Ventilation important

But won't eliminate risk  
Use a layered approach

### When monitoring CO<sub>2</sub>...

Measure and interpret with care

Measure more than once

Same reference value for all spaces?

More to evaluating ventilation than measuring CO<sub>2</sub>

**Report:** Space & system types, design ventilation rate, occupant density, **time of measurement relative to occupancy**, outdoor concentration, **uncertainty**.
